AEMax Gaming Studio

Construction futuristic voxel pack

The pack contains 138 models (excluding the division of models into composite ones).

Pak is designed for strategy and city-building simulators.

Most of the buildings are divided into two levels: weakened and main. "lowLevel" are weakened versions of the main buildings

It is better to use ready-made prefabs in the "Prefabs" folder.

Focused on personal computers. When used on mobile, it's best to take care of optimization ahead of time.

The glow of the lanterns (yellow voxels) is configured using post processing and is already built into the material

The building step is 3.2 in X and Z. For some buildings you need to add 0.4
